

3D DIMENSIONAL IMPRESSION

PLASTIFORM®

PLASTIFORM®, high precision replicating material for the industry.

Discover the PLASTIFORM® products that allow to control precisely unattainable or hard to access surfaces, too large, too heavy or too fragile to be handled parts, thanks to impression taking.

Internal forms

External forms

Complex forms

PLASTIFORM® PRODUCTS

DESCRIPTION

PLASTIFORM® products are made up of two components that solidify upon contact (mixing ratio 1:1). While curing, they imitate all details of the surface on which they are applied with a very high precision : dimensions, forms, texture, surface finish...

The products exist in different versions and consistencies :

- Liquid products (SRL)
- Cement product (SRC)
- Dough products (SRD)

They allow to obtain flexible, semi-flexible, rigid, or semi-rigid impressions.

APPLICATIONS

PLASTIFORM® products allow to perform :

- Internal complex forms control
- Internal simple forms control
- External complex forms control
- External simple forms control
- Roughness control Ra
- Visual surface finish control
- Protection, masking, seal
- Fix, clamp, add strength to parts

DIMENSIONAL IMPRESSION

The PLASTIFORM® polymer compounds have unique technical features :

- Virtually no shrinkage
- Micron accuracy
- Shape-retention memory
- No adhesion, no residue
- Environmentally friendly
- Dimensional stability
- Resistance

PLASTIFORM® PRODUCTS

MAIN CHARACTERISTICS

Each PLASTIFORM® has two main characteristics :

- The initial consistency **1**
- The final hardness **2**

1 The initial consistency

2 The final hardness

Liquid (SRL)	Cement (SRC)	Dough (SRD)	Flexible	Semi-flexible	Semi-Rigid	Rigid
recommended for the internal forms	recommended for the external forms	recommended for the external forms	recommended for complex forms	recommended for simple forms	recommended for simple forms	recommended for simple forms
total or sectorial impression	sectorial impression	sectorial impression	with removal constraint	with low removal constraint	without removal constraint	without removal constraint

This wide range of products enables PLASTIFORM® to provide solutions for a lot of different applications. According to your needs, you may choose a PLASTIFORM® with the suitable initial consistency and final hardness.

REMOVAL CONSTRAINT

When making a replica casting, some internal complex forms can make it difficult to remove the impression from the mould : groove, thread, undercuts, internal angle. It is called a removal constraint (or backdraft).

It's calculated with the following formula :

$$1 - \left[\frac{\text{Minimum dimension of the extraction hole}}{\text{Maximum internal dimension}} \right] = \text{Removal constraint (in \%)}$$

When this percentage is higher than 0%, you have to choose a flexible or semi-flexible product, that can be misshaped during its removal. When this percentage is 0%, there is no removal constraint. You can use a Semi-Rigid or Rigid product.

Examples :

HOW TO CHOOSE YOUR PLASTIFORM®

The choice of the appropriate PLASTIFORM® is usually made on the Initial Consistency - Final hardness combination.

CHOOSE THE INITIAL CONSISTENCY

Liquid products

With a liquid consistency, these products are «self-placing» and can be poured easily, even in very small details (thread, small bore...). They are recommended for internal total impressions, and for applications requiring flowing material.

- SRL2
- SRL3 V
- SRL5
- SRL8

Cement products

Non-flowing, these products are used for sectorial impressions (internal or external), and can be applied on vertical or overhead surfaces.

- SRC3
- SRC8 Ra
- SRC10

Technical dough products

With a «modeling clay» consistency, these products are mixed and applied by hand, to create external or internal sectorial impressions.

- SRD6
- SRD7
- SRD9

Re-Form

Small rigid balls to heat, these products produce very rigid impression. The resin is reusable at will.

- SRF

HOW TO CHOOSE YOUR PLASTIFORM®

CHOOSE THE FINAL HARDNESS

Flexible impressions

They accept a strong removal constraint ¹⁾ (up to 40%). The impression can be misshaped and stretched to be removed from its mould, then it will nevertheless invariably return to its original shape.

How to control the impression :

Non-Contact Measurement (optical control, profile projector, laser scan...)

SRL2

SRL3 V

SRC3

1) When making a replica casting, some internal complex forms can make it difficult to remove the impression from the mould : groove, thread, undercuts, internal angle. It is called a removal constraint (see details on page 3.)

Semi-flexible impressions

They accept a low removal constraint (up to 20%). The impression can be slightly misshaped to be removed from its mould, and return to its original shape.

How to control the impression :

Non-Contact Measurement (optical control, profile projector, laser scan...) with the help of the Twin Blade Cutter.

SRL5

SRD6

SRD7

Semi-rigid and rigid impressions

They do not accept any removal constraint, because of their rigidity.

How to control the impression :

Contact or Non-Contact Measurement (caliper, micrometer, optical control, profile projector, laser scan...).

SRL8

SRC8 Ra

SRC10

SRD9

Part control with Visio

Part control with SCAN

DIMENSIONAL CONTROL

INTERNAL COMPLEX FORMS

With some of the PLASTIFORM® products, it is now possible to easily inspect and measure internal complex features (thread, thread root, groove, radius...), by creating an internal complete impression.

It is recommended to choose a PLASTIFORM® combining the following characteristics :

- Liquid initial consistency
These self-placing compounds will completely fill the internal form of the part, even the finest details.
- Flexible or semi-flexible final hardness
The replica can be misshaped to be easily removed from the mould.

SRL2

INTERNAL SIMPLE FORMS

When no undercuts or complex shapes are present inside the part (no removal constraint), it is possible to choose a more rigid product, as the impression does not have to be misshaped to be removed.

It is recommended to choose a PLASTIFORM® combining the following characteristics :

- Liquid initial consistency
These self-placing compounds will completely fill the internal form of the part.
- Semi-flexible, semi-rigid or rigid final hardness
Easier to measure than soft impressions, especially because they can be «sliced» using the Twin Blade Cutter.

SRL5

SRL8

PLASTIFORM® makes it simple to control inaccessible or hard-to-reach internal features, and prevents destructive testings.

DIMENSIONAL CONTROL

EXTERNAL COMPLEX FORMS

PLASTIFORM® has developed less liquid products, more suitable for taking a sectorial replica cast of external complex forms (T-slots, grooves, notches...).

It is recommended to choose a PLASTIFORM® combining the following characteristics :

- Cement or dough initial consistency
They do not flow, and can be applied easily on vertical or overhead surfaces.
- Flexible or semi-flexible final hardness
The replica can be misshaped to be easily removed from the mould.

Thanks to the PLASTIFORM® Twin Blade Cutter, it is possible to create a cross section of the impression to control the features, for example with an optical machine Sylvac-Visio.

SRD6

SRC3

EXTERNAL SIMPLE FORMS

When no undercuts or complex shapes are present in the part (very low removal constraint), it is possible to choose a more rigid product, as the impression does not have to be misshaped to be removed.

It is recommended to choose a PLASTIFORM® combining the following characteristics :

- Cement or dough initial consistency
They do not flow, and can be applied easily on vertical or overhead surfaces.
- Semi-rigid or rigid final hardness
Easier to measure than soft impressions, especially because they can be «sliced» using the Twin Blade Cutter.

SRC8 Ra

SRC10

SRD7

SRD9

ROUGHNESS CONTROL Ra

INDIRECT CONTROL OF THE Ra

Some rigid products in the PLASTIFORM® range can be used for Indirect Roughness Control Ra.

When the surface Ra is $\geq 0,4 \mu\text{m}$, the roughness can be measured directly on the cast using a surface meter, and the result is faithful to the original.

For a lower roughness, other inspection methods can be used, including laser metrology and interferometry.

Impossible to reach features are no longer a problem, thanks to PLASTIFORM® impressions, which guarantees a virtually identical replica.

SRC8 Ra

2) Test conducted by the CETIM metrology laboratory, Nantes (F)

0,025 μm roughness standard

$R_a = 0,02602 \mu\text{m}$

R.G.X. PLASTIFORM® replica

$R_a = 0,02635 \mu\text{m}^2$

VISUAL SURFACE FINISH CONTROL

VISUAL SURFACE FINISH CONTROL

The SRL3V has been specially developed for visual surface finish inspection.

Used by mould makers and polishers, the product accurately imitates all details, surface defects (tool marks, damages, fractures, pitting, striations...) and surface shape (flatness, waviness, curvature...).

The shiny black colour and the material properties ensure higher quality images, which are easier to visually inspect than the original surface.

This process is also used for controlling inaccessible areas.

SRL3V

Original surface. Magnification x20

Replica. Magnification x20

PROTECTION - MASKING - SEAL

CREATE CUSTOM PROTECTIONS

PLASTIFORM® products can be used to protect or mask certain areas of a part during surface treatment, including :

- Sandblasting
- Painting
- Chemical and heat treatment
- Polishing
- Coating process : anodizing, chrome plating...

Because the casts are very durable and resistant, they can be re-used several times without being affected. Once cured, the PLASTIFORM® is impervious to most liquids. It can therefore be used to create custom-made seals.

SRL2

SRL5

FIX - CLAMP - STRENGTH TO PARTS

CREATE A CUSTOM CLAMPING SYSTEM

Positioning and clamping a fragile or complex part are two basic operations in most manufacturing industries.

Some PLASTIFORM® products, and more particularly the Re-FORM (infinitely re-usable thermoforming resin), enable these to be achieved easily and efficiently, by providing alternative solutions.

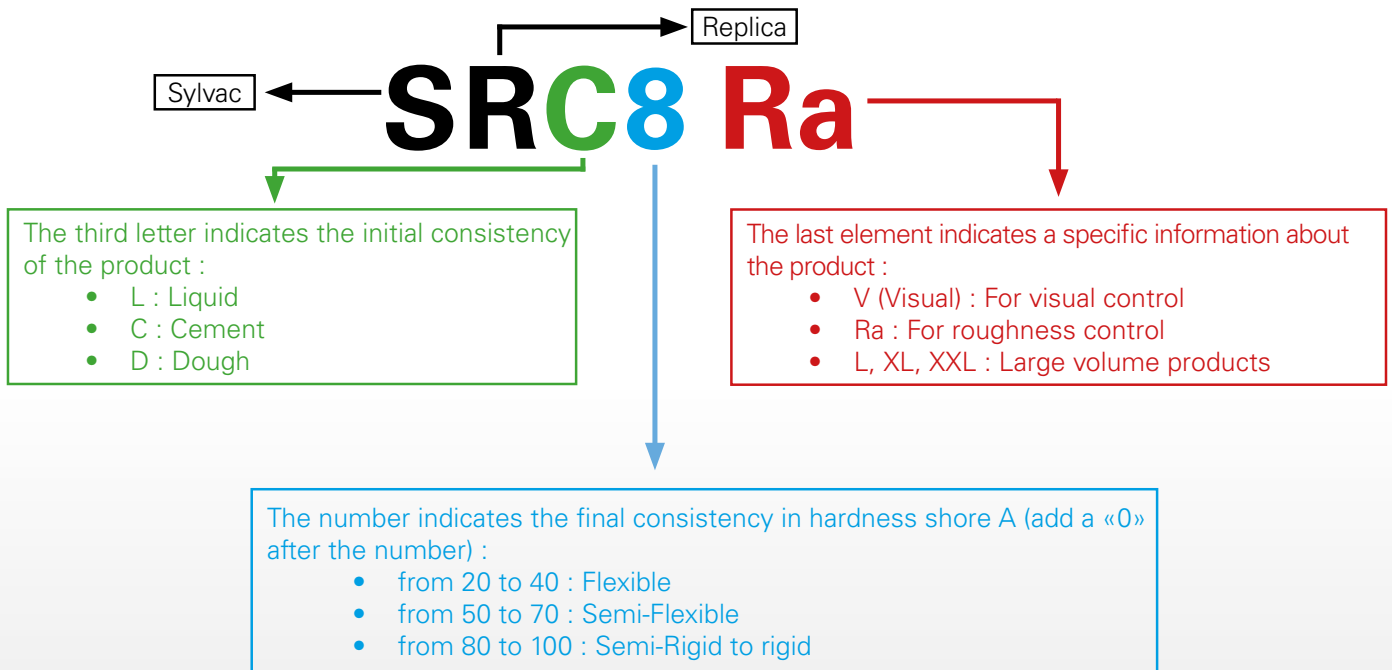

- Create a custom-made fixing platform
- Protect a part from clamping jaws
- Add strength to a fragile part
